It may serve both to defend against local infection and to prevent access of foreign antigens to the general immunologic system.

MISCELLANEOUS: The final C-region domain is deleted from Ref. 2 chain. It was isolated from a myeloma protein that contains 1 light and 1 heavy chain per molecule, linked by a disulfide bond. In contrast, normal mouse IgA molecules contain 2 light and 2 heavy chains and lack a light-heavy chain disulfide bond.

MISCELLANEOUS: M511 chain was isolated from a myeloma protein that his contain 1 chain was isolated from a myeloma protein that
                                                                                                                                                                                                                               binds phosphorylcholine.

MISCELLANEOUS: M511 sequence was compared with that of mouse MOPC 47A, and a genetic mechanism for the deletion of the CH3 domain of the mutant chain is proposed.

SIMILARITY: Contains 3 immunoglobulin-like domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               the alpha heavy chain derived e 13:365-374(1981).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       389
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          316

```
as docking protein and induces translocation of PTPNS,
PTPN11 and other binding partners from the cytosol to the
plasma membrane. Supports adhesion of cerebellar neurons, neurite
outgrowth and gilal cell attachment. May play a key role in
intracellular signaling during synaptogenesis and in synaptic
function. Involved in the negative regulation of receptor tyrosine
kinase-coupled cellular responses induced by cell adhesion, growth
factors or insulin. Mediates negative regulation of phagocytosis,
mast cell activation and dendritic cell activation. CD47 binding
prevents maturation of immature dendritic cells and inhibits
cytokine production by macure dendritic cells and inhibits
cytokine production by macure dendritic cells (By similarity).

-i- SUBUNIT: Binds PTPN11 when tyrosine-phosphorylated, except in
macrophages, where it primarily binds PTPN6. Binds GRB2 vitro.
Binds FGR. Binds JAKZ irrespective of its phosphorylation status
and forms a stable complex. Binds SCAP1 and/or SCAP2. The
resulting complex recruits FYB. Binds FYBS (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gresham H.D., Dale B.M., Potter J.W., Lowell C.A., Lagenaur C.F., Willman C. TISSUE SpEGIFICITY: Highly expressed in cerebral cortex, brain, spinal cord, cerebellum and spleen, and at much lower levels in kidney, thymus, heart, lung and liver. Within the cerebellum, highly expressed throughout the molecular layer and in synaptic glomeruli in the granule cell layer. Detected in neurons of the hippocampus and dentate gyrus, and in olfactory bulb. Not detecte in Purkinje cells. Highly expressed in the plexiform layers, optifiber layer and the outer segments of the photoreceptor layer in fiber layer and the outer segments of the photoreceptor layer in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Biol.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Eur. J. Inmunol. 28:1-11(1998).

Eur. J. Inmunol. 28:1-11(1998).

FUNCTION: Immunoglobulin-like cell surface receptor for CD47. Acts as docking protein and induces translocation of PTPN6, prevail and other binding partners from the cytosol to the plasma membrane. Supports adhesion of cerebellar neurons, neurite outgrowth and glial cell attachment. May play a key role in intracellular signaling during synaptogenesis and in synaptic function. Involved in the negative regulation of receptor tyrosine kinase-coupled cellular responses induced by cell adhesion, growth factors or insulin. Mediates negative regulation of phagocytosis, mast cell activation and dendritic cell activation. CD47 binding prevents maturation of immature dendritic cells (By similarity).

-i- SUBUNIT: Binds PTPN1 when tyrosine-phosphorylated, except in macrophages, where it primarily binds PTPN6. Binds GRB2 in vitro. Binds JAK2 irrespective of its phosphorylation status and forms a artshia commilex.
                                                                                         This SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                                                                                                           stable complex. Binds SCAP1 and/or SCAP2. The resulting conrecruits FYB. Binds FGR and PTK2B (By similarity). SUBCELLULAR LOCATION: Type I membrane protein. TISSUE SPECIFICITY: Highly expressed in spleen macrophages Detected in skin dendritic cells.
PTM: Phosphorylated on tyrosine residues (By similarity).
                                                                                                                                                                                                                                                              PTM: Phosphorylated on tyrosine residues (By similarity). SIMILARITY: Contains 2 immunoglobulin-like C1-type domain: SIMILARITY: Contains 1 immunoglobulin-like V-type domain.

```
as docking protein and induces translocation of PTN6;
PTN11 and other binding partners from the cytosol to the
plasma membrane. Supports adhesion of cerebellar neurons, neurite
outgrowth and gilal cell attachment. May play a key role in
intracellular signaling during synaptogenesis and in synaptic
function. Involved in the negative regulation of receptor tyrosine
kinase-coupled cellular responses induced by cell adhesion, growth
factors or insulin. Mediates negative regulation of phagocytosis,
mast cell activation and dendritic cell activation. CD47 binding
prevents maturation of immarture dendritic cells and inhibits
cytokine production by mature dendritic cells May play a role in
the release of nitric oxide by macrophages (By similarity).

SUBNUT: Binds PTN11 when tyrosine-phosphorylated, except in
macrophages, where it primarily binds PTN6. Binds GRB2 in vitro.

Binds FGR. Binds JAK2 irrespective of its phosphorylation status
and forms a stable complex. Binds SCAP1 and/or SCAP2. The
resulting complex recruits FYB. Binds PTX2B (By similarity).

-!- SUBCELIULAR LOCATION: Type I membrane protein.

-!- TISSUE SPECIFICITY: Highly expressed in brain, spleen, lung, liver
and kidney. Detected at lower levels in heart. Highly expressed in
dendritic cells.
                                                                                                                                                                                                                                                                                                                             This SWI

Proc. Natl. Acad. Sci. U.S.A. 68:599-594(1971).
-!- MISCELLANBOUS: The MOPC 315 cell line produces 2 light chains,
normal lambda-2 chain and 1 abnormal lambda-1 chain that is
missing a large part of the V region. The C region sequence (si
here) appears completely normal.
-!- SIMILARITY: Contains 1 immunoglobulin-like domain.

Biophys. Res. Commun. 183:163-169(1992).

-i- FUNCTION: IMPORTANT IN CELL-CELL RECOGNITION. APPEARS TO FUNCTION IN LEUKOCYTE-ENDOTHELIAL CELL ADHESION. INTERACTS WITH THE BETA-1 INTEGRIN VLA4 ON LEUKOCYTES, AND MEDIATES BOTH ADHESION AND SIGNAL TRANSDUCTION. THE VCAM1/VLA4 INTERACTION MAY PLAY A PATHOPHYSIOLOGIC ROLE BOTH IN IMMUNE RESPONSES AND IN LEUKOCYTE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       DOMAIN
